Application Number 09/714,325 Amendment dated September 3, 2004 Reply to Office Action of June 3, 2004

Amendments to the Claims:

This listing of claims replaces all prior versions, and listings, of claims in the application.

Listing of claims:

1. (Currently Amended) A method of storing data in executing instructions using an address trace cache in the environment of branch prediction comprising the steps of:

if a <u>first</u> routine composed of <u>a first group of</u> instructions is to be executed, storing an address corresponding to each instruction in the address trace cache according to an order of executed instructions;

if a <u>second</u> routine composed of <u>repeated</u> a <u>second group of</u> instructions is to be repeatedly executed, storing a routine start address, a routine end address, a current iteration count of the routine <u>representing a current number of executed iterations of the routine</u>, and a total number of iterations of the routine;

providing the <u>address</u> trace cache with a current <u>loop</u> iteration loop counter for counting the current iteration count when the routine of repeated instructions is executed and a total <u>loop</u> iteration loop counter for <u>counting</u> storing the total number of iterations of the routine of repeated instructions; and

addressing a start address which will be accessed subsequent to execution of the routine if the current iteration count and the total number of iterations are identical.
